• Lowers wellhead pressure resulting in higher flow rates and increased production
  
  • Up to 600 psi (differential)
  • Inlets to 700 psi
  • 200,000 Barrels per Day
  • Handles high gas volume fractions and slugging (up to 100%)
  • Significantly reduces up-front capital costs in design and permitting requirements

• Optimal for both well drawdown and pipeline boost for onshore and offshore applications
• Complete “flange-to-flange” complex systems are provided to match customer requirements
• Customized control package ensures that the pump always operates at optimum performance
